ComboPlus

ComBo Plus Gourd

032009v1

S&K MANUFACTURING

PARTS LIST

A: 2 Inner Gourd Halves
B: 2 Outer Gourd Halves
C: 1 Entrance Plate (or Tunnel)
D: 1 Porch
E: 1 Access Port Cap
F: 1 Vent Cap
G: 2 Entrance Door Plugs
H: 9 Colored Plastic Snaps, 6 White Plastic Snaps, 7 Screws

1. Put the 2 Black Inner Gourd Halves (A) together - lining up the holes. Push a colored snap through each of the tabs as shown
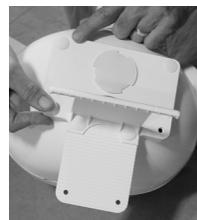

2. Place the inner gourd inside a section of a White Outer Gourd Half (B) - be sure to line up the entrances.

3. Connect the two Outer White Gourds (B) - with the black inner gourd lined up inside - by tightening the 7 (seven) screws. The first screw should go in the neck, then around the body of the gourd. Tighten until snug using a 6-inch extension with electric drill.

4. Using two white snaps, attach the porch to the entrance as shown.

5. Line up and attach entrance to gourd with four white snaps. When using a tunnel, porch is not required.

6. Place the Vent Cap on the top of the gourd. It can be turned to allow the gourd to be hung in different directions

7. Place the oval access port cap (E) over the inspection port.
NOTE: If it is difficult to snap on, loosen the screw above and below the port until cap snaps on easily.

For Early Spring, insert the Round Door Plug (RDP) inside the top of the inner black gourd, through the access port. The plug will keep warm air from escaping the nest area in early spring.
